

LEVERAGING ASSET MASTER DATA COURSE

Bridging Project Data to Reliable
Operational Performance

PEMAC

is a Canadian, not for profit association enabling excellence in maintenance, reliability, and asset management through collaboration, applied learning, leadership and advocacy.

Through effective management of built and natural physical assets, PEMAC members positively impact the daily lives and well-being of Canadians from coast to coast to coast.

THE COURSE

developed by PEMAC, prepares participants how to build and use high-quality asset master data and transactional data to strengthen an organization's maintenance readiness, improve reliability, and support safe, cost-effective performance across the asset lifecycle.

With a strong focus on practical application, the instructor-led course is designed for private and public sector professionals working in technical maintenance management and operations, capital projects and finance and administration who influence the quality of asset master data during design, commissioning and ongoing operations.

DESIGNED FOR

- Financial Managers
- Capital Project Managers
- Asset Information Governance
- Maintenance Managers & Supervisors
- Reliability Engineers
- Planners & Schedulers
- Data Administrators & Analysts
- Asset Management Specialists
- CMMS / EAM Administrators

DELIVERY

2 Great Options

- 30 hour course delivered live online, over 10 weeks, scheduled throughout the year.
- At your organization's site, in person, live online or hybrid, through private training program.

LESSONS

- Maintenance and reliability readiness: what good looks like.
- Lifecycle interdependencies and the readiness loop.
- Asset master data foundations.
- Transactional information that powers readiness.
- Data governance and rasci for project to operations handover.
- Data migration: from engineering sources to CMMS or EAM.
- Criticality, risk and strategy: a data driven playbook.
- Analytics, KPIs and ISO14224 and 55013
- Technology enablement: cmms or eam, condition monitoring and digital twins.
- End of life to next life: lessons learned and continuous improvement.
