

## **Maintenance Superintendent**

### **Westshore Terminals**

Delta, BC

Westshore Terminals Limited Partnership is owned by Westshore Terminals Investment Corporation. Operating since 1970 in Port of Vancouver, Westshore is the terminal of choice for Canadian coal mines and for United States mines in the Powder River Basin of Montana and Wyoming. Westshore Terminals is capable of handling up to 33 million tonnes of coal annually and ships to over 20 countries worldwide, providing billions in dollars of export revenue for Canada and British Columbia. The terminal is also undergoing a transition as it prepares to diversify by including potash in its export base. Preparation is underway with a target for 2026 to commence loading.

Connecting the mines to Westshore is a network of rail corridors, terminating at Westshore's west coast operations. Each train represents more than 14 jobs and \$3.1 million in economic activity. Westshore is to be proud to be Port Metro Vancouver's only dedicated coal terminal and busiest single coal export terminal in all of North America.

The Maintenance Superintendents actively manage the mechanical components of Westshore Terminals through planned maintenance, significant repairs, equipment breakdowns and projects under one million dollars. The Superintendents act to ensure all safety, environmental and maintenance standards are adhered to and maintenance goals are met, in order to continuously improve the Terminal's performance. Reporting to the Manager, Mechanical Maintenance, and working closely with the operations team, the Maintenance Superintendent will provide direction and leadership to workers from three ILWU locals who help contribute to the Terminal's success. Maintenance Superintendents typically work 12 hour shifts on a five-on/five-off rotation. This specific Superintendent role, after initial training, will settle into a maintenance planning and project focus which generally requires Monday to Friday day shifts except for vacation and sickness coverage of other Superintendents (approximately 6-8 weeks a year). Westshore is a 24/7 operation with an opportunistic maintenance schedule, conducting maintenance projects in windows where some equipment is available.

The ideal candidate will have a strong knowledge of safety performance and risk management and bring a demonstrated excellence in leadership with supervisory experience in a maintenance capacity within a progressive, heavy industrial, unionized environment. Ideally a Professional Engineer, the preferred candidate may also be a technologist/technician who's had demonstrated project management experience in relation to planned maintenance projects that are executed during opportunity windows between operations, as well as, during scheduled major outages. Essential to this role is experience managing unionized crews, consultants and contractors; the ability to multi-task managing multiple concurrent projects; and the ability to evaluate the long-term operational and financial impact of maintenance decisions.

This is a highly appealing role for a maintenance professional who loves working with very large industrial equipment in a complex operating environment. Based in Delta, BC. Westshore Terminals is an equal opportunity employer, and as such women, visible minorities, First Nations and those with disabilities are encouraged to apply.
